

DZSO/HLZ-220

Simple Set Up and Easy To Use

- Position the Panel and Light Modules according to the operational Code Letter.
- Locate the RAM, Amber Flasher and other kit items according to CAASOP.
- Switch each Light Module to ARM/REMOTE. Verify blue indicator LED is steady ON. Choose between White visible or IR setting.
- Use the controller for easy ON/OFF commands of the light modules.
- See User Manual included with the kit for complete instructions.

DROP ZONE SAFETY OFFICER KIT WIRELESS REMOTE OPERATION

The DZSO/HLZ-220 Kit is a light weight, portable wireless airborne drop zone kit comprised of a user-specified number of dual-function White and IR Lighting Modules remotely activated by a handheld Controller Module.

Each kit is provided with a manual Amber Flashing module.

Remote-controlled devices are powered by a single replaceable CR123 battery that operate on an FCC-approved discreet 2.4 GHz radio network.

A compact, easily deployed, bungee activated mounting tripod is provided for each lighting module. The tripod elevates the lighting modules 18" off the ground, tilting them for optimal long-range sighting.

The Complete Kit also includes an Omni Directional RAM with stakes, New Visual Signal Panels (NVS), Anemometer, Clinometer, Wind Direction Indicator (DZM/WDI) and much more.

This kit can be scaled up or down to best meet the needs of an operation.
